FICTIONAL / GUIDED DEMO — Aftershock parsing fixture (not real research)

Cross-Page Occurrence Tracking in Two-Page Fixtures (Fixture)

Two-page fixtures check that extracted occurrences survive a page boundary. The motivating example, as shown by https://doi.org/10.5555/aft-fixture-003, is revisited below so the same identifier must be recognized in more than one surface form.

The bare identifier 10.5555/aft-fixture-003 appears here in raw form; dedupe logic must reconcile it with the URL form above.

A mention of earlier work in this paragraph is historical discussion only; discussing a source never means this fixture relies on it.
